

Jumper Hook

Control Jumpers & Eliminate Sag

Product Dimensions: 11" x 4.5" x .5"
Product Weight: 6 oz

The Jumper Hook is designed to eliminate jumper clamp sag and prevent potential cross-phasing situations without the time consuming use of tape, bungee cords or rope. The Jumper Hook also minimizes a jumper clamp swaying in high wind conditions.

Simply hang multiple Jumper Hook units along the intended jumper clamp path and let the tool cradle the jumper clamp. The Jumper Hook installs easily with a gloved hand or shotgun stick. It will fit over any class 2 or 3 line hose and exhibits a flash-over resistance of over 50 kV.

The Jumper Hook is made of a high visibility polymer material that can handle the rigors of daily use even in cold temperatures.
